### Comments on analysis

#### ➤ Analysis of 52 cards deck:

In the calculations for 'Actual and theoretical probabilities for various Poker hands', 'Actual and theoretical probabilities for Ranks' and 'Actual and theoretical probabilities for Suits', 1 (one) out of 27 sample values (corresponding to 3.71%) lie inside the 95% confidence limits. It is acceptable for about 5% of the confidence limits to be exceeded.

#### ➤ Analysis of 36 cards deck:

In the calculations for 'Actual and theoretical probabilities for various Poker hands', 'Actual and theoretical probabilities for Ranks' and 'Actual and theoretical probabilities for Suits', all 23 sample values lie inside the 95% confidence limits. It is acceptable for about 5% of the confidence limits to be exceeded.

The above results for Poker indicate that the RNG is working correctly.

### 4. Conclusion

Analysis for 'Odds on various hands', 'Ranks' and 'Suits' for **52 cards deck and 36 cards deck** indicated statistical randomness.

iTech Labs has done limited sanity checks to verify the integrity of the game logs. iTech Labs also maintains a copy of the game logs for verification purposes. There were a large enough number of game records to give the calculations sufficient statistical power.

We conclude that the Random Number Generator (RNG) is working correctly.
